EDUCATION

B.Tech, Information Technology

IIIT Vadodara, Gujarat, India

Expected Graduation: Aug 2027

7.46 / 10.0 GPA

Coursework: Data Structures, Algorithms, Algorithm Analysis, Operating Systems, Object-Oriented design, Backend Systems

PROFESSIONAL EXPERIENCE

Aarogya Kaya | SDE Intern | Remote

July 2025 - Jan 2026

- Architected Go backend using CQRS, PostgreSQL, and Supabase RPCs for efficient and centralized data access.
- Designed a multi-tiered backend architecture using in-memory cache, Redis, and database, reducing average read latency from **420ms to 38ms (91%)** and maintaining **p95 latency below 250ms**.
- Translated evolving product requirements into backend designs across 15+ modules, contributing through the **full SDLC**.
- Applied **SOLID principles and design patterns**, reducing code duplication by **30%**.
- Engineered fault-tolerant asynchronous synchronization pipelines with retries and idempotent processing, supporting 500+ daily events while maintaining 99.9% data consistency.

Open Source Contributor | Remote

July 2025 - May 2026

- **Contributed to Next.js (Vercel)** by migrating the patch-next utility from CommonJS to TypeScript ESM, eliminating repeated dependency reinstalls and reducing contributor setup overhead.
- Contributed 22 merged Pull Requests and opened 12 Issues across open-source projects, incorporating maintainer feedback to fix bugs, implement features, and improve developer tooling.

PROJECTS

a3.store | Distributed Key-value Store | Python, EKS, AWS, Kubernetes, Prometheus, Security

[Live](#) | [Github](#)

- Developed a **leaderless Distributed key-value store** implementing replication, failure detection, synchronization, gossip-based membership, and anti-entropy repair across a 3-node cluster.
- Deployed on AWS EKS using Kubernetes StatefulSets and persistent volumes, enabling **rolling upgrades, pod recovery and self-healing behavior**.
- Built **Pytest-based tests** covering replication, failure detection, synchronization, and node-failure scenarios, with GitHub Actions enforcing automated checks and preventing regressions.

Dumpmail | Open-Source Email Automation Platform | Next.js, TypeScript, Supabase, GitHub Actions

[Live](#) | [Github](#)

- Built an open-source email automation platform with time-based campaign scheduling, workflow execution, and dynamic template processing for automated email delivery.
- Designed a CI-driven automation engine using GitHub Actions/GitLab CI with Supabase-backed lead management and automated Playwright testing.

TECHNICAL SKILLS

Languages: C/C++, Go, Python, Java, Javascript, SQL

Frontend: React.js, React Flow, Next.js, TypeScript

Backend & System: FastAPI, Node.js, gRPC, REST APIs, Kafka, Redis

Cloud & Infrastructure: AWS, EKS, Kubernetes, Docker, Terraform, Linux, IAM, EC2, VPC, Git, GitHub

Testing: Pytest, Vitest, Jest, Playwright, Cypress, Selenium

ACHIEVEMENT

- Ranked **365th** among **15,804** participants in CodeChef **START192D**.
- Ranked **3,026th** among **17,000+** participants in Codeforces Round 1110 (Div. 1 + Div. 2)
- **Solved 500+ DSA problems** across Codeforces, LeetCode and CodeChef.

LEADERSHIP & ACTIVITIES

- Organized an intra-college hackathon and mentored **25+ teams** as a **Technical Committee Core Member**.
- Led recruitment, mentorship, and event initiatives for **100+ students** as **Joint Secretary of DOT Club**.
