

Indian Institute of Information Technology Vadodara

Mohd Anas

Education

Indian Institute of Information Technology Vadodara
B.Tech, Information Technology 7.46 / 10.0 GPA

Expected Graduation: Aug 2027
Gujarat, India

Experience

Aarogya Kaya

July 2025 – Jan 2026

SDE Intern

Remote

- Built Go Backend services for Shiprocket and Instagram Graph API integrations, implementing CQRS architecture and a three-tier caching strategy (runtime, Redis, and database), reducing average read latency from 420ms to 38ms (91%) and maintaining p95 response times below 250ms.
- Refactored 15+ Backend modules using SOLID principles and Design Patterns (such as Dependency Injection), reducing code duplication by 30% and improving feature delivery speed.

Open Source Contributor

July 2025 – Present

Contributor

Remote

- Contributed a merged Pull Request to Next.js (Vercel), migrating the patch-next utility from CommonJS to TypeScript ESM and reducing contributor setup overhead by eliminating repeated dependency reinstalls.
- Contributed 22 merged Pull Requests and opened 12 Issues across open-source projects, fixing bugs, implementing features, and improving developer tooling.

Projects

a3.store | *Distributed Key-value Store — Python, EKS, AWS, SQLite, Prometheus* | GitHub | Live

- Developed a leaderless Distributed key-value store implementing replication, failure detection, synchronization, gossip-based membership, and anti-entropy repair across a 3-node cluster.
- Deployed the system on AWS EKS using Kubernetes StatefulSets and persistent volumes, managing rolling upgrades, pod restarts, and self-healing behavior.
- Implemented operational dashboards and disaster-recovery workflows to make the system debuggable, reliable, and usable in production-like environments.

Shop-Intelligence | *Customer Behavior Analytics using Computer Vision — Python, Next.js, Pytest* | GitHub | Live

- Designed and implemented a real-time customer behavior analytics pipeline for 4+ synchronized CCTV streams, achieving 15 FPS processing using YOLOv8, ByteTrack, and ReID-based cross-camera visitor tracking.
- Engineered a concurrent video-processing architecture using multiprocessing workers, multi-threading, Message Queue to process camera streams in parallel and reduce frame-processing latency to 50ms.
- Architected a global visitor registry and Event-Driven analytics engine that generated real-time events for Backend retail dashboards and customer behavior analytics.

Achievements

- Codeforces Pupil (1245)
- Solved 500+ DSA problems across Codeforces, LeetCode, Codechef and GFG

Technical Skills

- Languages & Frameworks:** Python, Go, C/C++, JavaScript, TypeScript, Rust, SQL, Node.js, React, Next.js
- Tools & Technologies:** Git, GitHub, Docker, Kubernetes, AWS, EC2, EKS, IAM, VPC, Terraform, Linux, Kafka, Jenkins, Redis, SQLite, Prometheus, Grafana, Loki
- AI & LLMs:** HuggingFace, LangChain, PyTorch, NLP, Deep Learning, Generative AI

Administrative Role

Technical Committee, IIIT Vadodara

March 2024 – March 2025

Core Member

IIIT Vadodara

- Coordinated an intra-college hackathon for 150+ participants and mentored 25+ teams for project Development.
