EDUCATION

B.Tech, Information Technology

IIIT Vadodara, Gujarat, India

Expected Graduation: Jan 2027

7.43 / 10.0 GPA

Coursework: Backend System, Distributed System, Operating Systems, Object-Oriented Programming (OOP), Design Patterns, Data Structures & Algorithms, Machine Learning, Artificial Intelligence

PROFESSIONAL EXPERIENCE

Aarogya Kaya | SDE Intern | Remote

July 2025 - Jan 2026

- Architected Go Backend services to handle Shiprocket and Instagram Data, implementing **CQRS architecture**, **OAuth-based authentication** and a **three-tier caching strategy (in-memory, Redis, and database)**, reducing average read latency from 420ms to 38ms (91%) and maintaining p95 response times below 250ms.
- Refactored 15+ Backend modules using **SOLID principles** and **Design Patterns** (such as **Dependency Injection**), reducing code duplication by 30% and supporting **Secure SDLC** practices through modular, testable code..
- Engineered fault-tolerant data synchronization pipelines with retry mechanisms, improving data integrity, secure API communication and supporting **500+** daily synchronization events with **99.9%** consistency.

Open Source Contributor | Remote

July 2025 - Present

- Contributed a merged Pull Request to **Next.js (Vercel)**, migrating the patch-next utility from CommonJS to TypeScript ESM and reducing contributor setup overhead by eliminating repeated dependency reinstalls.
- Contributed **22 merged Pull Requests** and opened **12 Issues** across open-source projects, fixing bugs, implementing features, and improving developer tooling.

PROJECTS

a3.store | Distributed Key-value Store | Python, EKS, AWS, SQLite, Prometheus

Live | GitHub

- Designed **CI/CD pipelines** using GitHub Actions to **automate testing**, container builds, and deployment workflows for Kubernetes-based applications.
- Deployed the system on **AWS EKS** using Kubernetes StatefulSets, persistent volumes, **IAM**, **Kubernetes Secrets**, and production deployment best practices, improving reliability, operational resilience, and **Kubernetes security**.
- Instrumented production-grade **observability** using **Prometheus**, **Grafana**, and **Loki** for real-time monitoring, incident diagnosis, and production debugging across **distributed services**.

Second Brain | Career Comparison Simulation | Python, Redis Queue, Zustand, Render

Live | GitHub

- Reduced API latency by **65% (from 15s to 5.2s)** by offloading a 3-pass LLM pipeline to **Redis/RQ background workers** and optimizing **FastAPI + asyncpg** request handling.
- Built an interactive decision-graph visualizer supporting **100+ nodes** at **60 FPS** using **React Flow** and **Zustand**, enabling smooth zoom, pan, and branch expansion.
- Diagnosed structured-generation failures and introduced **Zod-based schema validation**, increasing valid JSON outputs to **98.2%** through **input validation** and stronger API contract enforcement.

TECHNICAL SKILLS

Languages & Frameworks: Python, Go, C/C++, JavaScript, TypeScript, Rust, SQL, Node.js, React, Next.js, gRPC

Tools & Technologies: Git, GitHub, Github Actions, CI/CD, Docker, **Kubernetes**, **AWS**, EC2, EKS, IAM, VPC, **Linux**, Kafka, Terraform, Redis, SQLite, Prometheus, Grafana, Loki

Security: OAuth, OAuth2.0, JWT, Secure SDLC, OWASP Top 10 (Familiar), Authentication, Authorization

ACHIEVEMENT

- Achieved Codeforces **Pupil (1245)**.
- **Solved 500+** Data Structures & Algorithms problems across Codeforces, LeetCode, CodeChef, and GeeksforGeeks.

LEADERSHIP & ACTIVITIES

- Organized an intra-college hackathon and mentored **25+ teams** as a **Technical Committee Core Member**.
- Organized **5+** events and workshops, driving student engagement in **competitive programming** as **Coding Club Member**.
