EDUCATION

B.Tech, Information Technology

IIIT Vadodara, Gujarat, India

August 2023 - May 2027

7.46 / 10.0 GPA

Coursework: Data Structures & Algorithms, Operating Systems, Object-Oriented Design, Backend Systems, Machine Learning, Artificial Intelligence

PROFESSIONAL EXPERIENCE

Aarogya Kaya | SDE Intern | Remote

July 2025 - January 2026

- Architected a Go backend using CQRS, PostgreSQL, and Supabase RPCs for authenticated APIs across multiple modules.
- Designed a multi-tiered backend architecture using in-memory cache, Redis, and database, reducing average read latency from **420ms to 38ms (91%)** and maintaining **p95 latency below 250ms**.
- Translated evolving business requirements into backend designs across 15+ modules, contributing through the **full SDLC**.
- Engineered fault-tolerant asynchronous pipelines with retries and idempotent processing for a production system serving **1,000+ users daily**, maintaining 99.9% data consistency.

Open Source Contributor | Remote

July 2025 - May 2026

- **Contributed to Next.js (Vercel)** by migrating the patch-next utility from CommonJS to TypeScript ESM, eliminating repeated dependency reinstalls and reducing contributor setup overhead.
- Merged **22 PRs and 12 issues** across open-source projects, incorporating **maintainer code-review feedback**, fixing bugs, documenting changes, and improving developer tooling.

PROJECTS

A3.store – Distributed Key-value Store | Python, EKS, AWS, Kubernetes, Prometheus, Security

[Live](#) | [Github](#)

- Developed a **leaderless key-value store** across a **3-node cluster**, implementing replication, failure detection, gossip-based membership, synchronization, and anti-entropy repair.
- Deployed the system on **AWS EKS** using Kubernetes StatefulSets and persistent volumes, with **GitHub Actions, Pytest, Prometheus, Grafana, and Loki** supporting automated testing, recovery validation, and real-time observability.

Dumpmail – Open-Source Email Automation Platform | Next.js, TypeScript, Supabase, GitHub Actions

[Live](#) | [Github](#)

- Built a **Next.js, Node.js, and TypeScript** email automation platform, using **Node.js scripts for email delivery**, scheduled campaigns, workflow execution, dynamic template processing, and Supabase-backed lead management.
- Engineered a **CI-driven testing and delivery workflow** using GitHub Actions/GitLab CI and **Playwright**, automating application checks and validating end-to-end campaign workflows.

Shop-Intelligence – Real-Time Customer Behavior Analytics | Python, Computer Vision, Queue, Pytest

[Video](#) | [Github](#)

- Built a distributed **computer vision pipeline** for **4 synchronized CCTV streams** using concurrent workers and message queues, processing **15 FPS** with **50 ms frame-processing latency**.
- Designed an **event-driven retail analytics engine** with a global visitor registry, generating real-time customer behavior events and dashboards while using multiprocessing and multithreading for scalable multi-camera processing.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go, Python, Java, C/C++, SQL

Frontend: React.js, Next.js, Redux, Tailwind, HTML, CSS

Backend & System: FastAPI, Node.js, REST APIs, PostgreSQL, Supabase, Redis, gRPC

AI & LLMs: Langchain, TensorFlow, Hugging Face, Computer Vision, Generative AI, LLM Agents, RAG

Cloud & Infrastructure: AWS, EKS, Kubernetes, Docker, Terraform, Git/GitHub, CI/CD, Playwright, Pytest

ACHIEVEMENT

- Ranked **365th** among **15,804** participants in CodeChef **START192D**.
- Ranked **3,026th** among **17,000+** participants in Codeforces Round 1110 (Div. 1 + Div. 2)

LEADERSHIP & ACTIVITIES

- Organized an intra-college hackathon and mentored **25+ teams** as a **Technical Committee Core Member**.
