EDUCATION

B.Tech in Information Technology

August 2023 - May 2027

IIIT Vadodara, Gujarat, India

Coursework: Data Structures & Algorithms, Operating Systems, Object-Oriented Design, Backend Systems

EXPERIENCE

Aarogya Kaya | Remote | Software Engineer Intern

July 2025 - January 2026

- **Architected backend services** using CQRS, PostgreSQL, and Supabase RPCs, securing **15 RPC functions and database tables** with **JWT/RBAC, Row-Level Security, admin-only controls, environment secrets, and least-privilege access**.
- Optimized **backend read paths** with in-memory caching, Redis, and database access patterns, reducing average latency from **420ms to 38ms** while maintaining **p95 latency below 250ms**.
- Engineered **retryable, idempotent asynchronous pipelines** for a production service serving **1,000+ daily users**, and automated unit test, Playwright E2E, lint, build, and deployment checks through **CI/CD pipelines**.

Next.js | Remote | Contributor

July 2025 - May 2026

- Migrated the **Next.js (Vercel) patch-next utility** from CommonJS to TypeScript ESM, saving **15–30 seconds** per local reinstall during development and testing.

PROJECTS

A3.store – Distributed Key-Value Database | Python, AWS EKS, Kubernetes, Terraform, gRPC

[Live](#) | [Github](#)

- Built a **leaderless distributed key-value store** with gRPC replication, quorum reads/writes, gossip failure detection, and anti-entropy recovery across a **3-node RF=2 cluster**.
- Deployed **3 stateful replicas on AWS EKS** using Kubernetes and Terraform, adding persistent storage, health checks, disruption handling, and replica-aware pod placement.

Dumpmail – Email Automation Platform | Node.js, Next.js, Supabase, GitHub Actions, SMTP/IMAP

[Live](#) | [Github](#)

- Built a **Next.js, Node.js, and TypeScript** email automation platform, using **Node.js scripts for email delivery**, scheduled campaigns, workflow execution, dynamic template processing, and Supabase-backed lead management.
- Engineered a **CI-driven testing and delivery workflow** using GitHub Actions/GitLab CI, automating application checks and validating end-to-end campaign workflows.

Second Brain – Agentic Career Path Simulator | Python, LLMs, Redis Queue, React Flow

[Live](#) | [Github](#)

- Architected a **multi-stage AI reasoning backend** that transforms natural-language decisions into **scenario graphs, tradeoffs, option scores, and branching outcomes** through pass-based LLM orchestration.
- Implemented **asynchronous processing with Redis/RQ**, PostgreSQL-backed decision state, **OpenRouter model fallback**, and contextual what-if expansion that dynamically appends new branches to existing scenario graphs.

Shady-cph – Competitive Programming CLI | TypeScript, Node.js, Playwright, npm

[NPM](#) | [Github](#)

- Built and published **Shady-CPH**, a Node.js CLI with a **local HTTP daemon** that automates Codeforces testcase retrieval, multi-language compilation/execution, output validation, and solution submission, reaching **674 npm downloads**.

TECHNICAL SKILLS

Languages: Go, Python, C/C++, JavaScript, TypeScript, SQL

Backend & Systems: Node.js, REST APIs, gRPC, Supabase, PostgreSQL, Redis, Distributed Systems

Cloud & Infrastructure: AWS, EKS, Kubernetes, Docker, Terraform, CI/CD, VPC, IAM, Git/GitHub

AI & Agentic coding: Opencode, Claude Code, RAG, MCP, Prompt Engineering, Semantic Retrieval, Agentic Workflows

Reliability & Observability: Vitest, Pytest, Playwright, Prometheus, Grafana, Loki

ACHIEVEMENTS

- Ranked **365th** among **15,804** participants in CodeChef **START192D**.
- Ranked **3,026th** among **17,000+** participants in Codeforces Round 1110 (Div. 1 + Div. 2).

LEADERSHIP & ACTIVITIES

- Organized an intra-college hackathon and mentored **25+ teams** as a **Technical Committee Core Member**.
